FOREST DENSITY TOUR

Crawford Creek Levels-of-Growing-Stock Study Site

Hosted by the Southern Blues Partners

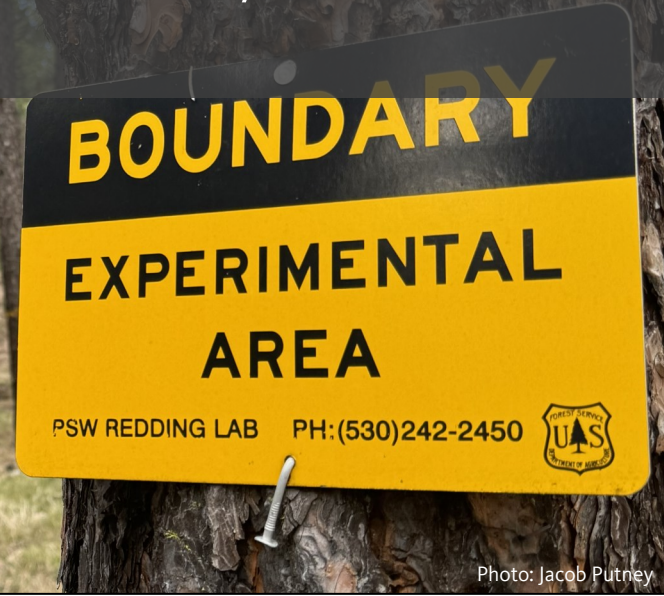

Photo: Jacob Putney

Join us for a tour of the Crawford Creek Levels-of-Growing-Stock (LOGS) Study Site, hosted by the Southern Blues Partners. Established in 1967, the Crawford Creek LOGS site is one of several across the Western U.S., to examine the effects of a range of forest stand densities on the long-term growth and development of ponderosa pine. Learn how forest density influences tree growth, forest health, fire resilience, plant diversity, and wildlife habitat. Meet with professionals, landowners, and contractors, and enjoy a great day in the woods.

Tour will include several stops within the Malheur National Forest and will require moderate hiking along rocky and dirt roads, forested areas, and other uneven terrain. Participants should plan to meet at the Blue Mountain Work Center ([76027 US-26, Bates, OR 97817](https://www.oregon.gov/PSW/REDDING/Pages/76027-US-26-Bates-OR-97817)) around 8:30am. Carpooling may also be available. Tour agenda and logistical details to come!

Friday, Sept. 13th, 2024

9:00am — 1:00pm

Malheur National Forest

What to Bring:

- ◆ Sturdy Boots/Shoes
- ◆ Lunch
- ◆ Water Bottle
